

Copenhagen Symposiums

2019

The Dental Trauma Guide is pleased to invite our colleagues from all over the world to two 2-day symposiums with international speakers at Copenhagen University Hospital.

Eruption and Impaction

- Prevention and treatment of tooth eruption abnormalities

April 24-25

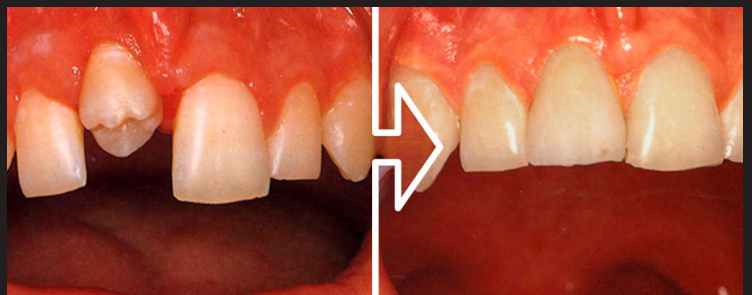

Eruption disturbances in the permanent dentition comprise retentions, impactions, and ectopias and affect almost 20% of the population. From diagnosis to treatment, these conditions may represent serious challenges for the clinician. At this symposium leading experts will present etiologic considerations, diagnostic possibilities and detailed orthodontic and surgical treatment strategies for each potentially involved tooth type. Furthermore, complications such as root resorption and nerve damage will be discussed.

Prof. Adrian Becker will be keynote speaker. Prof. Becker has studied eruption complications for decades and he has published the famous textbook "The Orthodontic Treatment of Impacted teeth". He is accompanied by a series of other internationally recognized speakers.

Tooth Auto-transplantation

- Tooth autotransplantation as a method to treat tooth loss

April 26-27

There is currently an increasing interest worldwide to learn more about autotransplantation of teeth to replace missing or lost teeth, especially when dealing with young growing patients when implants shall not be installed. Autotransplantation has a good prognosis, requires surgical skills and careful multidisciplinary planning and performance between surgeons, orthodontists, pediatric dentists, other specialties and general dentists. We are bringing together recognized expertise from the world with experience in this field to share their experience and secrets of success.

DO NOT MISS THE EARLY BIRD DISCOUNT!

Register at www.dentaltraumaguide.org/2019-symposium before February 1, 2019, and receive our Early Bird discount!
